

~~SECRET~~

FUTURE DIVIDENDS

As the Office of Video Communications developes, with proper management, there would imerge the Staff and the Facilities necessary for the future production of in-plant motion pictures (excluding possibly the processing phases). At such a time it would appear a wise and efficient move to turn the Motion Picture production equipment now available in the Audio-Visual Department of the Office of Training over to the Office of Video Communications thus combining the camera equipment, the Visual Communications Technical and Administrative Staff, and the additional studio facilities into one consolidated Technically and Administratively proficient unit. Coordination of film production needed to meet the various Agency requirements would thus be expedited. The contracting of various professional production personnel such as sound technicians etc., would be done away with and the problems involved where personnel are dividing their time between visual production requirements and other training requirements would be eliminated. The Office of Video Communications at this time would most likely become the Office of Visual Communications.

As an additional dividend the Technical Staff of the O. V. C. could handle the maintenance of the closed-circuit TV equipment presently installed and being used within the classrooms of the Office of Training.
